Sequence 5116, Application US/09134001C
Patent No. 6380370
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: DIDERMIDIS FOR DIAGNOSTICS AND THERABEUTICS
TITLE OF INVENTION: US/09/134,001C
CURRENT APPLICATION NUMBER: US/09/134,001C
CURRENT FILING DATE: 1998-08-13
PRIOR APPLICATION NUMBER: US 60/064,964
PRIOR FILING DATE: 1997-11-08
PRIOR FILING DATE: 1997-08-14
NUMBER OF SEQ ID NOS: 5674
SEQ ID NO 5116
                             APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .

Patent No. 6582706
GENERAL INFORMATION:
APPLICANT: Johnson, John E.
TITLE OF INVENTION: Paccine Compositions Comprising Streptococcus
TITLE OF INVENTION: Motifs
FILE REFERENCE: 469201-444
CURRENT PALLICATION NUMBER: US/09/468,656A
CURRENT PALLICATION NUMBER: 60/113,048
PRIOR FILING DATE: 1999-12-02
PRIOR FILING DATE: 1998-12-21
                                                                                                                                                                                                                                                                                                              VSNPGTINITNISNNSNINSQASQSNDIDSLLKQLYKLPLSQRHVESDGLVFDPAQIISRT

                                                                                                                                                                                                                                           adjusted 359:1819-1827(2002).

-I-FUNCTION: Necessary for efficient RNA polymerase transcription elongation past template-encoded arresting sites. The arresting sites in DNA have the property of trapping a certain fraction of elongating RNA polymerases that pass through, resulting in locked ternary complexes. Cleavage of the nascent transcript by cleavage factors such as greA or greB allows the resumption of elongation from the new 3'terminus. GreA releases sequences of 2 to 3 nucleotides (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Transcription regulation; DNA-binding; Coiled coil; Complete proteome. The IICD domains contain the sugar binding site and the transmembrane channel; the IIA domain contains the primary phosphorylation site (the donor is phospho-HPr); IIA transfers its phosphoryl group to the IIB domain which finally transfers it to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- CATALYTIC ACTIVITY: Protein N-phosphohistidine + sugar = protein histidine + sugar phosphate.
-| histidine + COATION: Cytoplasmic (Probable).
-| SUBCELLUIAR LOCATION: Cytoplasmic (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDINE=54290319; PubMed=8019415;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              from pre-tRNA to produce the mature 5 terminus. It can also cleave other RNA to produce the mature 5 terminus. It can also cleave other RNA substrates such as 4.5S RNA. The protein component plays an auxiliary but essential role in vivo by binding to the 5'-leader sequence and broadening the substrate specificity of the
                                 Ribonuclease P protein component (EC 3.1.26.5) (RNaseP protein) (RNase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   extra-nucleotide from tRNA precursor.
SUBUNIT: Consists of a catalytic RNA component (M1 or rnpB) and protein subunit (By similarity).
SIMILARITY: Belongs to the rnpA family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ribozyme (By similarity).
CATALYTIC ACTIVITY: Endonucleolytic cleavage of RNA, removing 5'
                                                                                                                                                                                                                                                                                                                                                                                      Zhang Y.-Q., Ren S.-X., Li H.-L., Wang Y.-X., Fu G., Yang J., Qin Z.-Q., Miao Y.-G., Wang W.-Y., Chen R.-S., Shen Y., Chen Z., Yuan Z.-H., Zhao G.-P., Qu D., Danchin A., Wen Y.-M., "Genome-based analysis of virulence genes in a non-biofilm-forming
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TIGRFAMS; TIGRO0188; rnpA; 1. -

"Ceramides are bound to structural proteins of the human foreskin epidermal cornified cell envelope.";
J. Biol. Chem. 273:17763-17770(1998).
-!-FONCTION: Component of the cornified envelope of keratinocytes. May link the cornified envelope to desmosomes and intermediate filaments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Omega-hydroxyceramide glutamate ester (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4 X 4 AA TANDEM REPEATS OF K-G-S-P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    lipids like omega-hydroxyceramide.
SIMILARITY: Contains 7 plectin repeats.
SIMILARITY: Contains 1 spectrin repeat
SIMILARITY: Belongs to the plakin or cytolinker family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CENTRAL FIBROUS ROD DOMAIN.

SEQUENCE FROM N.A., FUNCTION, AND TISSUE SPECIFICITY. PARTIAL

rissue=Embryo;

\*\*MEDLINE=98198453; PubMed=9531534; Steneberg P., Englund C., Kronhamn J., Weaver T.A., Samakovlis C.; Steneberg P., Englund C., Kronhamn J., Weaver T.A., Samakovlis C.; Steneberg P., Englund C., Kronhamn J., Weaver T.A., Samakovlis C.; Translational readthrough in the hdc mRNA generates a novel branching in inhibitor in the Drosophila trachea."; Genes Dev. 12:956-967(1998).

-!- PUNCTION: Required for imaginal cell differentiation, may be involved in hormonal responsiveness during metamorphosis. Involved in an inhibitory signaling mechanism to determine the number of cells that will form unicellular sprouts in the trachea. Regulated by transcription factor esg. The longer hdc protein is completely functional and the shorter protein carries some function.

-!- SUBCELLULAR LOCATION: Cytoplasmic.

-!- TISSUE SPECIFICITY: Expressed in all imaginal cells of the embryo and larvae. Expressed in a subset of tracheal fusion cells from stage 14 to the end of embryogenesis in metameres 2-9, lateral

trunk and ventral anastomoses. MISCELLANBOUS: Readthrough of the terminator UAA occurs between codons for Ala-650 and His-652. Readthrough is not always suppressed as the shorter protein is more abundant. CAUTION: Ref.2 sequence differs from that shown due to erroneous

gene model prediction.

TISSUE SPECIFICITY: EXPRESED FREDOMINANTLY IN SPLEEN, THYMUS, AND
PERIPHERAL BLOOD LEUKOCYTES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Biol. Chem. 273:29210-29217(1998).

FUNCTION: TRANSCRIPTIONAL ACTIVATOR. BINDS TO THE INTERFERON-
STIMULATED RESPONSE ELEMENT (ISRE) IN IFN PROMOTERS AND IN THE Q
PROMOTER (QP) OF EBV NUCLEAR ANTIGEN-1 (EBNA1).

SUBCELJULAR LOCATION: Nuclear (Potential).
ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SEQUENCE FROM N.A. Nucleotide sequences of Dictyosellum discoideum developmentally regulated cDNAs rich in (AAC) imply proteins that contain clusters of asparagine, glutamine, or threonine.";
Mol. Gen. Genet. 218:453-459(1989).
--- DEVELOPMENTAL STAGE: The concentration of AAC-rich mRNAs is low in dormant spores and growing cells, but increases during spore-germination and multicellular development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MÎSCELÎANEOUS: Several proteins derive from AAC-rich mRNA, which, due to a frameshift also have ACA and CAA codons and thus are Asn-, Thr- or Gln-rich.

NyAlternate names: hypothetical protein T32G6.14
Cispecies: Arabidopsis thaliana (mouse-ear cress)
Cispecies: Aseason: T00818; A84844
Richary, November 1999
Aiscession: T00818
Aiscession: Molecule Fype: DN
Aiscession: A

D98004
histidine Motif-Containing protein [imported] - Streptococcus pneumoniae (strain R6)
C; Species: Streptococcus pneumoniae
C; Date: 22-Oct-2001 #sequence_revision 22-Oct-2001 #text_change 02-Nov-2001
C; Accession: D98004
